

MyDBLite Personal Inventory Program

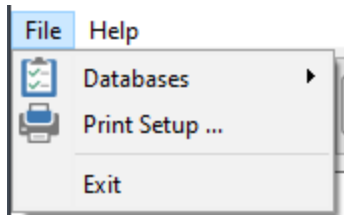

MyDBLite Personal Inventory Program is a Windows desktop database program that is used to store a user's inventory for personal, insurance and/or police report incident. If a natural disaster, fire or theft occurs, many times it is too late to gather up the serial numbers, photos and purchase prices when you file a claim. You are left to the mercy of a nameless, faceless, person to determine your reimbursement, if any.

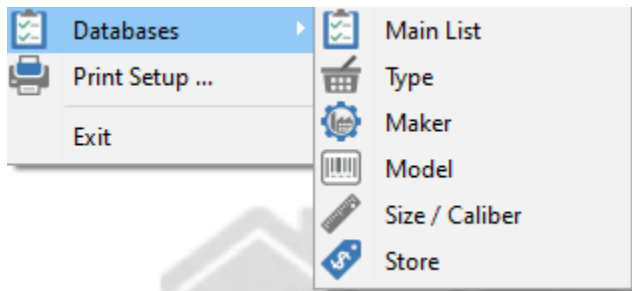

MyDBLite gives the user peace of mind in knowing a USB drive, the cloud or thumb drive has them covered.

Main Screen:

- menu section of the software also easy access to the different areas of the program.

- allows access via a pull down menu to the various tables within this database.

An easier way to access the tables is to click on the icons on the program screen. See below:

Each button allows access to each table.

- used to access the inventory list to add/edit/delete entries in the table.

- used to access the Item Type table to add/edit/delete entries in the Item table.

- used to access the Maker/Manufacturer add/edit/delete entries in the table.

- used to access the Model table to add/edit/delete entries in the table.

- used to access the Size/Caliber table to add/edit/delete entries in the table.

- used to access the Where you bought/store add/edit/delete entries in the table.

-- used to access a backup feature that allows user to copy this program & user data to a different location.

- used to access the contact form at www.mydblite.com. Here you can contact us for support.

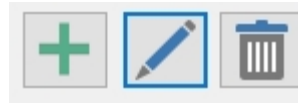

- Calls the document.

Status bar – shows user the current date and time and what window is currently active.

- Inventory List Browse:
